DETAILED ACTION

Claims 19-36 have been examined. Claims 1-18 have been cancelled

This action is made **Non-Final**.

Specification

The disclosure is objected to because of the following informalities:

Change the limitation „braking" to "braking" (see page 5 lines 12 and 20)

Appropriate correction is required.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 19-36 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claims 19-34, the instant claims neither transform a particular article nor positively tie to a particular machine or apparatus, and therefore do not qualify as a statutory process. While the claims recite a series of steps or acts to be performed, a statutory "process" under 35 U.S.C. 101 must (1) be tied to a particular machine or apparatus or (2) transform a particular article to a different state or thing (See *In re Bilski*, 545 F.3d 943, 88 USPQ2d 1385 (Fed Cir. 2008)). This is called the "machine-or-transformation test". There are two corollaries to the machine-or-transformation test. First, a mere field-of-use limitation is generally insufficient to render an otherwise ineligible method claim patent-eligible. This means the machine

or transformation must impose meaningful limits on the method claim's scope to pass the test. Second, insignificant extra-solution activity will not transform an unpatentable principle into a patentable process. This means reciting a specific machine or a particular transformation of a specific article in an insignificant step, such a data gathering or outputting, is not sufficient to pass the test.

Regarding claims 35-36, the instant claims are directed to a "computer program having program code. The claim only recites software per se (descriptive material covered in MPEP 2106.01), which constitute as non-statutory subject matter.

Allowable Subject Matter

Claims 19-36 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 101 set forth in this Office action.

The primary reason for allowance for claims 19 and 35 is the inclusion of in order to determining the reliability function and the secondary reliability function, software components of the software-based electronic system are taken into joint consideration, with the aid of the hardware components to which the software components are distributed in conjunction with the rest of the limitation set forth in the claim.

The remaining claims, not specifically mentioned, would also be allowable because they are dependent upon one of the claim mentioned above.

"Quantifying the Reliability of Embedded Systems by Automated Analysis" of Liggesmeyer et al. discloses checking a safety and reliability of a software-based electronic system (see abstract). However, the prior art fails to disclose other specifics

of the claim as disclosed above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
